

RestroPOS: Marketing Landing Page & Lead Engine

This document details the structure, lead collection engine, and interactive features of the RestroPOS marketing app.

1. Landing Page Design

The landing page (`restropos-marketing/src/app/page.tsx`) is designed as a premium, high-converting showcase for potential restaurant clients:

- **Visuals:** Follows a dark-mode-first aesthetic with a rich, dark background, warm orange/amber highlights, and glassmorphic (blurred transparent border) blocks.
- **Copywriting:** Highlights core pain points for Indian restaurant owners (billing speed, GST calculations, internet downtime, staff turnover).
- **Social Proof:** Displays mock testimonials from high-volume Indian restaurant owners praising the 3-click checkout speed and QR tables.

2. Interactive POS Builder & Configurator

A key feature on the landing page is the **Interactive POS Builder** (located at the `#pos-builder` anchor), allowing prospects to customize their system:

- **Hardware Selection:** Users can choose how many hardware terminals they need:
 - Cashier Terminals (Desktops/iPads)
 - Thermal Receipt Printers
 - Table QR Code Stands
 - Handheld Waiter Tablets
- **Add-on Services:** Options to add Premium Support, Multi-branch reporting, and Custom GST Billing setup.
- **Real-Time Price Calculator:** Dynamically computes the setup cost and annual software pricing based on selected toggles, giving an instant, transparent quote (e.g., **■14,999/year flat rate** + selected hardware).

3. Lead Capture & Seeding Engine

When a restaurant owner configures their ideal setup, they fill out a contact form:

- **Captured Data:**
 - Owner's Name
 - Restaurant Name
 - Email Address
 - Phone Number
 - Configured Hardware list and total pricing quote
- **Database Insertion:** The details are submitted via a POST request to `/api/leads`. The route inserts a record into the Lead table in the database.
- **Auto-Sync:** The lead record is saved, allowing the sales/operations team to access it via the **Ops / God Mode Dashboard** (`/ops`) under "Recent Signups (Last 7 Days)", enabling instant sales follow-up.
